Source. The Monitoring the Future study, the University of Michigan.

Notes. One-year change scores differ from those in Table 4 because Table 4 was corrected to use half-sample change scores and this table was not similarly corrected.

Level of significance of difference between the two most recent classes: s = .05, ss = .01, sss = .001. “—” indicates data not available. Any apparent inconsistency between the change estimate and the prevalence estimates for the two most recent years is due to rounding. See Table D-108 for the number of subgroup cases. See appendix B for definition of variables in table.

Data based on one of two forms in 1991–1996 and on two of four forms beginning in 1997; *N* is one half of *N* indicated in Table D-108.

^aParental education is an average score of mother’s education and father’s education. See appendix B for details.

^bTo derive percentages for each racial subgroup, data for the specified year and the previous year have been combined to increase subgroup sample sizes and thus provide more stable estimates. For the data beginning in 2005, see the race/ethnicity note at the end of appendix D.
